Senior Full-Stack Software Engineer

PROFESSIONAL SUMMARY

I am a software engineer with nine years of experience working on web applications and internal tools. I have delivered contract-winning prototypes and earned internal promotion to a senior role through my ownership of multiple significant repositories and mentor-ship of junior team members. Recently, my focus has been on databases and back-end services but I have full-stack experience, learn fast, and can contribute to every aspect of a project.

Areas of expertise include:

- REST APIs
- Databases
- Website Design
- TypeScript/JavaScript
- Java
- SQL

TECHNICAL SKILLS

Languages: TypeScript/JavaScript, Java, SQL, HTML

Applications: Angular, Spring, Node.js, PostgreSQL, Elasticsearch, Flyway, React, Redux, Kafka, Maven

Infrastructure: Windows, Linux

WORK EXPERIENCE

Expression Networks LLC, Washington, DC

July, 2020-March, 2025

Senior Full-stack Developer, September, 2024-March, 2025

At Expression, I was one of the lead developers on a government project developing a platform to manage the approval process for the use of radio equipment domestically and internationally. I was responsible for maintaining the BPMN workflows, designing the SQL databases, and developing both the Java back-end REST API as well as the Angular front-end website.

- Led a team of six developers to successfully deliver a live government-facing application, managing the team's tasking and working directly with the clients to translate requirements into actionable tickets while completing my own development work

Software Developer, July, 2020-September, 2024

- Delivered a contract-winning prototype for a React Redux application handling live satellite sensor data using Kafka to stream events over websockets to a real-time web platform
- Implemented the core Java services for recording data from user workflows into PostgreSQL and then providing it to the rest of the application via REST API
- Improved performance across the application by redesigning the PostgreSQL databases, substantially improving performance for complex queries
- Solved database deployment struggles for on-premises clients by moving all databases onto Flyway migrations, eliminating the need for difficult manual updates
- Fixed siloed approaches to file handling across the multi-repository architecture by implementing a parsing library for handling XSD-defined XMLs with serializing, deserializing, and recursive search utilities

Synexxus Inc, Washington, DC

November, 2017-March, 2020

Software Engineer

At Synexxus, I worked as a full-stack developer on several different projects including a production pipeline tool for the in-house hardware team, two separate remote monitoring platforms for transformer substations and LED streetlights, as

well as a military vehicle platform. I held responsibilities for the design, implementation, and ownership of several core repositories.

- Designed and delivered an internal hardware pipeline tool, in cooperation with the in-house hardware team, responsible for tracking the production and deployment of assets. Built on a Spring back-end and Angular front-end
- Delivered a modernized replacement of an existing application for remote diagnostics of a smart LED streetlight platform using a Spring and Angular stack
- Implemented core features and designed databases for diagnostics, monitoring, and control of a smart transformer substation platform using Spring, Angular, and MySQL
- Contributed features to several C++ projects, picking up C++, Qt, and CAN bus messaging on short notice

Akira Technologies Inc, Washington, DC**May, 2015-October, 2017****Software Developer**

- Created an internal HR site for performance tracking using Angular and Node.js
- Delivered a sales workflow tool for the internal sales team using Angular and MongoDB

ADDITIONAL EXPERIENCE**EmPower Joint Venture, Washington, DC****January, 2020-June, 2020****Software Engineer, Independent Contractor**

- Hired as an independent contractor to lead development support on a tool delivered but no longer supported by Synexxus
- Delivered bug fixes and feature enhancements based on client feedback

EDUCATION**The George Washington University, Washington, DC****Bachelor of Arts, Computer Science and Psychology****2016**

INTERESTS/COMMUNITY**Hobby Projects**

- Created a Lua mod improving the functionality and usability of an important piece of UI in a popular Warhammer 40K video game. The mod reached 11,000+ unique subscriptions and was subsequently mainlined into the core game by the developers.
